Have loved the way this machine has worked, washes fantastic, love the power wash option that gives cold water fill profile wash etc. After about 6 years we had to replace the motor because the brushes had worn. Now last month it has sort of lost its mind. I had set a load on with NO FINAL SPIN as the option. I very rarely do this. Usually at the end of that cycle the display comes up and asks if you want to spin or not. You can then select a spin or just go to the drain cycle. Unfortunately DH came along saw the washer stalled and turned it off and then could not get the door open again. Anyhoo, after that turning the machine to either the drain or the spin program and pushing the start button just resulted in erratic results the machine just would not do it. I thought somehow it was confused. For the last few weeks we have been running normal cycles fine. Everything working as expected. The only way to get the machine to do anything is to start a new program and let it go through it. It will NOT let me select a drain or a spin program. Tonight I came home and it seemed to be taking forever to go through a program adding time and more time as it went. I have the service manual. I just spent a couple of hours going through EVERY single test in the service manual. The machine passes them all with flying colors, absolutely no error codes are stored. BUT, the machine STILL will not let me select a drain or a spin cycle and run it. For a little more when I bought it I could have had the Miele 1986, so wish I had done that 9 years ago. However, live and learn. Thank you! Water consumption is rated from one to six stars. <http://adaviestransportltd.com/userfiles/compustar-1wfm4r-manual.xml>

- **bosch wfl2060uc service manual, bosch wfl2060uc service manual pdf, bosch wfl2060uc service manual download, bosch wfl2060uc service manual online, bosch wfl2060uc service manual 2016.**

The dishwashers are assessed on the amount of water needed to wash a load and on the average water usage per place setting. Both figures are available for each dishwasher on the WELS rating site. The lower the amount needed to wash a place setting, the higher the star rating. There are over 1000 dishwasher models rating 4 to 6 stars on the site, with water consumption per load ranging from 6.5 L to 14 L. ie from 1.72 gallons to 3.70 gallons. The one and two stars obviously are the least efficient, especially in terms of water used per setting but the highest water consumption figure I could find belonged to a couple of two stars that use 19L for a full load. Q Comments 26 Amazing work. Looks more spacious and lighter. I love your countertop choice and how you've integrated glass front cabinets. Congratulations! p.s. have you considered using the same material you used on your countertops for your backsplash. Quartz is so easy for maintenance and I think it wouldn't look too busy because the rest of your kitchen is so light and can allow this. But if you decide to do this, quartz would have to be book matched and you would need to pay special attention to the seams. See More Corner sink vs. But then the dishwasher would be at the end of a cabinet run. And next to the fridge. I guess I could build a support for the countertop though. And I cook and bake quite a lot. But this is food for thought and I'll mull it over. That extra countertop and storage space is very tempting. No, we can't remove any walls or closets here. The coop is generous about some things dogs are allowed including pit bulls and big dogs but strict about maintaining the architectural history of our classic prewar building. And the hallway structure is an old-fashioned built-in pantry cabinet that I like and am currently stripping and restoring. See More Need advice on

kitchen makeover Q Comments 10 For starters, get rid of the buffet or move it to another room. <http://chinathermalspraying.com/uploads/files/1599631725.xml>

Remember, entertaining is not to show off either your house or your cooking skills, it is to foster fellowship and good feelings between the people assembled. This is not to say that you shouldn't use your best tablecloth, just remember the purpose of the gathering and don't sweat the small stuff. To hide the pots and pans when entertaining, make as much as possible ahead of time to have the pans already washed and put away. Plan the menu with this in mind. For example, mashed potatoes keep very well in a crock pot for several hours, corn custard cooks in the oven, ham can be reheated in the microwave on its serving platter. The other thing that I have done is to put the unavoidable dirty pans in the laundry room sink until I can get to cleaning them up. It also helps if your kitchen is totally decluttered before you start nothing on the counters that won't be used for the meal. If you serve appetizers you will have dirty dishes and glasses coming into the kitchen just as you are serving up the main course. Have the dishwasher empty so that these dishes can be put away and washed while you are eating if your dishwasher is quiet enough. Also be sure to have an empty wastebasket so that any paper napkins or plates can be cleared away easily. These tricks won't make the serving perfect, but it will go a long way to show that you are organized..See More buffalotina Original Author 7 years ago Thank you so much. I have run through all the service tips tests and they all came out fine. Unfortunately the rest of that manual would be beyond my capability. I called a service guy today and he said he would probably have to start by replacing the control board which I already know I do not want to spend that much on this machine. I am very reluctant to get someone out because I think this thing could be a needle in a haystack. I will see if it completes.

It may well do, but there is definitely something intermittent going on whereby some loads don't complete and the stand alone drain and spin cycles do not want to start. Sometimes if the grounding is weak the boards will act weird like yours is doing. To add an extra ground to your washer try loosening a screw in back and wrap a wire around it and then attach the wire to your cold water pipe. That is fascinating. The machine has been installed for 9 years and this is only a recent issue. But perhaps boards getting older etc it is becoming more of a problem or something. Most certainly it is intermittent. Tonight I ran a full program, it finished on time and after it the machine WOULD let me run a stand alone drain and a stand alone spin program I tried just to test it. So definitely intermittent. I will bring some copper wire home from work to do as you say, can't harm! Thank you! Better machine overall than the Bosch, but the new Miele's run on 120v rather than 240v and thus take a long time to heat the water, so I wouldn't want one. You can swap washers or just pull out the control board and put it in your old one. I have tried unplugging overnight once. Problem is this is intermittent so it is hard to systemize what is going on. I will try unplugging again. In my area these machines are rare doubt I would find one on CL, but I could always look. After all I am now thinking of putting mine on there. However, I would not expect any purchasers will probably donate to Habitat. It still has life in it. However, if this Bosch is dead then it is the best of the rest IMHO and I just don't want to replace with Bosch again. It's called a floating ground. The wires in the house, plug outlet and breaker box can get a little corrosion at the connection points and the result is a weak ground. Many electronics rely on the ground as part of their circuitry and when the ground is weak the electronics are not seeing what they are supposed to see and sometimes become confused.

<https://www.becompta.be/emploi/3gm30-workshop-manual>

A floating ground doesn't have to affect the entire house as it may be only on one circuit. Parts are generally Good or Bad but not both. It's important to eliminate all other possibilities before replacing a part. This information is great. I believe the machine is currently not accepting instructions to run the stand alone drain and spin programs. I am armed with wire and will hook it up tonight to see if it changes something. If it is as you say then I believe it should almost be an instant fix. I will report back. I ground the washer by connecting copper wire wrapped around a screw on the back of the

cabinet to my cold water supply pipe. Unplugged machine while I did this. The machine still does not want to start the drain or the spin cycle, the stand alone ones. I had to enter the service mode, which I now know so well, to use the drain pump test program to empty it. Then began a new quick wash cold cycle to simulate a rinse and spin to get the laundry out. That failed. service mode again to drain. Now on a quick cotton wash to see if I can get that to complete. I think I am going to call my dealer tomorrow and order the W3033, new in box, gulp, over the phone. Looks like this Bosch is going under real fast. I was almost just testing it thinking I was pulling the plug on it prematurely. but now I don't think so. Ironically a friend of mine who I was venting to about it then just had her 3 year old Bosch Nexxt 500 drum stop turning or spinning. I got the service manual and we ran the diagnostics and it looks like her motor control board is dead.
